

## Egging for shipping

### Procedure

- ❑ Collect eggs as in "Collecting Eggs for Stock" except, after rinsing eggs:
- ❑ Fold filter paper in half being careful not to crush the eggs.
- ❑ Wet a new filter paper disk with de-ionized water. Fold this paper over the circle containing the eggs.
- ❑ Place both papers in a 6-inch zip-lock bag. Wet a paper towel (brown or white) and squeeze excess water out of it. Fold it and place it inside the bag next to the eggs.
- ❑ Close zip-lock bag allowing some air to remain inside bag. This will act as a cushion so eggs will not be crushed.
- ❑ Label bag with appropriate MR4 label including item number and date. See Label SOP for label printing directions.
- ❑ Place bag in appropriate shipping container containing a non-frozen, room temperature ice-pack and foam padding material.
- ❑ Enter egging information in MR4 database. Print a Product Information Sheet (PISh).
- ❑ Insert PISh in zip lock bag and put inside the box.
- ❑ Print shipping label; notify recipients.
- ❑ Seal box and affix shipping label.
- ❑ Insert shipping information in database.
